

REPORT PATELLA EXAMINATION

Name of the dog: *Nikon Kokee's Midsummer Fairy Queen*

Breed: *jack russel terrier* Gender: male/ female

Born: *26/06/2016*

Pedigree: Country: *Nederland* Number: *NHSB 3049145*

Tattoo/chip number: *52814 0000650441*

Owners Name: *Bouckaert Rita*

Adress: *Bosveldstraat 11*

City/Country: *8450 Wingene*

Clinical examination of the above mentioned dog on *9/01/18* (date) showed:
(please mark the appropriate item or text)

- No signs for the presence of patella luxation: (Patella "free").
- That on palpation of the left and/or right patella the capsule seems quite loose (to the inside and/or outside), but the patella is not luxatable.
- That the patella (left and/or right) is not stable enough located in the femoral trochlea: she can be luxated to the outside and/or the inside by rotating the tibia and/or by local pressure.
This animal has patella luxation grade 1.
- That the patella (left / right) at movement of the joint, when standing or walking, spontaneously (only occasionally / more often) luxates to the inside / outside.
This animal has patella luxation grade 2.
- Remarks: (f.e. Grade 3 or 4, or the presence of arthrosis of other origin):
.....
